

Botox Bruising?

The Aesthetic market is booming despite the economy. Botox is the number 1 procedure performed by Aesthetic offices, however many patients experience bruising. Visit www.antibruise.com for releif.

Malvern, PA ([BizHWY](http://www.bizhwy.com)) September 23, 2010 - Market studies revel that the aesthetic market has exploded even in this down economic market. The number 1 procedure that aesthetic physicians perform is Botox. Even with this beautifying procedure, some patients can leave the office with a bruise from the injection.

"According to Dr. Phil Werschler who lectures and practices Dermatology in Washington, "a great product to use either before or after the procedure to minimize bruising is Arnica Forte."

Arnika Forte can be purchased at www.antibruise.com and is well worth the investment to keep you looking beautiful.[b]/[b]
