

## POWER AND PROTECT!

*Storm got your phone system down?*

Taunton, MA ([BizHWY](http://www.bizhwy.com)) August 31, 2011 - Outside the building you have little control over power and access coming into your network but you can control power in your office! An uninterrupted power supply or UPS.

The on-battery runtime of most uninterruptible power sources can be relatively short, 5-15 minutes, but sufficient to allow time to bring an auxiliary power source on line, or to properly shut down the protected equipment.

While not limited to protecting any particular type of equipment, a UPS is typically used to protect computers, data centers, telecommunication equipment or other electrical equipment where an unexpected power disruption could cause serious business disruption or data loss. Call EP Communications for assistance today!
