

## TTAD Software Goes Beta

*TTAD Software starts beta testing on September 3rd 2012. One of the most well designed and best priced software for FFL dealers, TTAD Software is announcing a beta launch to be started on Sep 3rd.*

Gilbert, AZ ([BizHWY](http://www.bizhwy.com)) September 2, 2012 - TTAD Software, one of the newest software for FFL dealers to hit the market is announcing a beta launch to commence on September 3rd, tomorrow and will last 30 days. They are releasing the software to a select few FFL dealers around the country who have offered to use the software on a trial basis and give their feedback.

Granted, the software is not perfect, what software is? However, these guys know what they are doing. Their competitors have done similar things but all requiring large sums of money for the software license. Some as much as \$1000.00 a year. WOW!!!

Better be one hell of a software for that price point. Well, we have looked at the competitors and are not impressed with many of them.

They are setting up this software to be able to run on iPad, Tablet, Computers, and any device you can think of.

They are tied in directly to the FBI for one click background checks, set to be ready in Nov of 2012. They are set up with one click FFL checks within the software allowing for huge time savings in verification of other firearms dealers who you are shipping to or receiving from.

Every form you can think of that you would need to use as a dealer is contained within the software and are planned to be able to be filled out automatically based on the task you wish to complete. That's impressive!!!

Get excited for this software and this company. They have a young owner, Bryan Kowacich only 31 who bootstrapped this project on his own, and are set to be the top, leading company in the software industry for firearms dealers. Keep you eye on these guys.
